

## **NEWS RELEASE**

*9 April 2019*

### **Cromax pushes productivity boundaries with its Ultra Performance Energy System including the new Ultra Performance Non-Sanding Surfacer**

The Ultra Performance Energy System from Cromax® aims to offer refinishers faster process times while reducing energy consumption. Using revolutionary Axalta technology, the system gives bodyshops the flexibility to match their workload to the right products by finding the balance between speed and energy use, while also ensuring outstanding results. The Ultra Performance Energy System comprises: PS1800 Metal Pretreatment Wipes; Ultra Performance Energy Surfacers PS1081, PS1084 and PS1087; the new Ultra Performance Non-Sanding Surfacers NS2081, NS2084 and NS2087; Cromax Basecoat; and CC6700 Ultra Performance Energy Clear.

Kevin Welling, Training Academy Manager for Axalta in the UK and Ireland, says. “The new Ultra Performance Non-Sanding Surfacers NS2081 (white), NS2084 (grey) and NS2087 (black), take the Ultra Performance Energy System to the next level.”

Thanks to patented Axalta technology, the new wet-on-wet Ultra Performance Non-Sanding Surfacers deliver the most productive preparation process available in the market for the overcoating of new parts. “When using the Ultra Performance Non-Sanding Surfacers in combination with activated Cromax Basecoat and CC6700 Ultra Performance Energy Clear, a vehicle part can be refinished in just 36 minutes, greatly boosting productivity in the bodyshop,” says Welling.

#### **Easy mixing**

The Ultra Performance Non-Sanding Surfacers have a simple 1:1:0.2 mixing ratio with the AR7202 Non-Sanding Surfacer Activator and AZ9800 Energy Surfacer Accelerator.

The surfacers are available in the three shades, white (VS1), grey (VS4) and black (VS7) and are part of the ValueShade® concept which delivers the optimal undercoat for every topcoat colour, for faster coverage and reduced basecoat consumption.

### **Excellent vertical stability and ultra-short flash-off times**

The special formulation of the Ultra Performance Non-Sanding Surfacers means they offer high stability on vertical surfaces. They are easy to handle and fast to apply in just one or two coats. And with an impressive flash-off time of just five minutes before activated Cromax Basecoat can be applied, parts can be denibbed to remove dust particles, or overcoated almost immediately with no need to force air dry or dry using IR technology. This helps refinishers to optimise their workflow, resulting in increased throughput.

Thanks to innovative technology, the Ultra Performance Energy System allows refinishers to achieve a high-quality appearance with outstanding gloss hold-out after top coating.

“Every product in the Ultra Performance Energy System has been designed to help bodyshops achieve a higher throughput while using less energy. And even if a bodyshop decides to let a repair fully airdry, the overall process time is only 74 minutes and still enables outstanding results,” says Welling. “It’s the only system that works at 60°C, 40°C and even 20°C, which means savings on energy costs of up to 70% without compromising quality or speed.”

For more information on the new Ultra Performance Non-Sanding Surfacers and the Ultra Performance Energy System, contact your local distributor or visit

### **About Cromax**

Cromax, one of the global refinish coating brands from Axalta, is designed to increase productivity from the front of the bodyshop to the back with coatings systems engineered for fast and accurate application. Our localised business solutions, advanced colour measurement technology, marketing support and pragmatic innovations form the basis of a highly-productive refinish process. Cromax helps bodyshops drive their business forward.
